RealFi STAKING

Staking is a term used in the Decentralized Finance ecosystem which means to lock up an asset over an agreed period of time to earn a reward. This is analogous to the savings in the fiat banking system.

Here, one is expected to stake the Deficonnect ecosystem native token \$DFC which is the currency of choice for this platform over a period of time according to what works for the user and in turn earn rewards from staking for that period of time.

AVAILABLE PACKAGES

There are three (3) packages under the RealFi Staking, these include Diamond, Silver, and Gold packages each of which offers different rewards and incentives with varying maturity periods. Below is a summary of the different packages and their rewards.
